After publication, the authors requested to correct Table I and some minor errors in the text.

The Publisher apologizes for any inconvenience this may cause.

The correct sections are reproduced below.

- In the abstract section, the logistic regression analysis has been changed to Cox regression analysis.
- In the results section, tertial has been replaced with tertile.
- In Table I, the term "women" has been moved to the right column.
- The caption has been added to Table I. "All values are presented as number (%) or means ± SDs. BMI = Body mass index; SBP = Systolic blood pressure; DBP = Diastolic blood pressure; HDL = High density lipoprotein; ALT = Alanine aminotransferase; AST = Aspartate aminotransferase; GGT = Gamma-glutamyltransferase; GFR = Glomerular filtration rate. aHeavy drinker was defined as consuming seven or more drinks on the same occasion, more than 3 days per week. bHeavy exercise was defined as moderate or heavier regular physical exercise performed at least 30 minutes a day, on 3 or more days per week".
- Part of the caption of Table II has been changed "Model 2 was adjusted for the variables in model 1. Model 3 was adjusted for the variables in model 2…".
- Part of the caption of Table III has been changed "Model 2 was adjusted for the variables in model 1. Model 3 was adjusted for the variables in model 2…".
